IFICATION e: the mixture is not classified as hazardous in compliance with Regulation (EC) 1272/200 ances presenting a health or environmental hazard within the meaning of Regulation (EC) mmunity workplace exposure limit, classified as PBT/vPvB nor included in the Candidate acerns (SVHC). et is not required for this mixture; however this Safety Data Sheet provides important age, transport and other manipulation. No adverse effects for human health are expected for the mixture under normal condition of usage, the mixture is biologically inert. When melted, it can cause serious burns if contacted with skin and eyes. Ingestion of a small amount should not cause any troubles. Inhaling of loosen dust or potential decomposition products of melted/overheated mixtur in high concentration can irritate moderately respiratory system and mucous membranes. No adverse effects in the environment are expected for the mixture; the mixture is almoss biologically inert. Within the environment the mixture underlies very slow biological decomposition.  |  |  |  |  |  |

IFICATION e: the mixture is not classified as hazardous in compliance with Regulation (EC) 1272/200 ances presenting a health or environmental hazard within the meaning of Regulation (EC) mmunity workplace exposure limit, classified as PBT/vPvB nor included in the Candidate acerns (SVHC). et is not required for this mixture; however this Safety Data Sheet provides important age, transport and other manipulation. No adverse effects for human health are expected for the mixture under normal condition of usage, the mixture is biologically inert. When melted, it can cause serious burns if contacted with skin and eyes. Ingestion of a small amount should not cause any troubles. Inhaling of loosen dust or potential decomposition products of melted/overheated mixtur in high concentration can irritate moderately respiratory system and mucous membranes. No adverse effects in the environment are expected for the mixture; the mixture is almos biologically inert. Within the environment the mixture underlies very slow biological decomposition.   |  |  |  |  |  |

# SECTION 4: FIRST AID MEASURES

#### 4.1 Description of first aid measures

Health hazard is no minimal, being neither irritating, corrosive, volatile, nor toxic. Effects of over exposure: There are no hazards under normal use conditions. Observe all user considerations and safety measures stated on the packaging. In case of any health problem or uncertainty seek medical attention and provide information from this Material Safety Data Sheet. Unconscious persons place in the stabilized position and observe the breathing. Never give any fluids to unconscious persons. Be careful when manipulating hot products - danger of skin burns.

conforms to Regulation EC No. 1907/2006 (REACH), Regulation EC No. 1272/2008 (CLP) and Commission Regulation EU No. 2015/830

#### 8.2 Exposure controls

#### Appropriate engineering controls:

Avoid contact with skin, eyes and mucous membranes. Avoid prolonged or repeated contact with skin. Always observe good personal hygiene measures, such as washing after handling the material and before eating, drinking, and/or smoking. Routinely wash work clothing and protective equipment to remove contaminants. Discard contaminated clothing and footwear that cannot be cleaned. Personal protective equipment selections vary based on potential exposure conditions such as applications, handling practices, concentration and ventilation. Information on the selection of protective equipment for use with this material, as provided below, is based upon intended, normal usage.

Individual protection measures, such as personal protective equipment:

a) Eye / face protection

No special requirements are needed under normal conditions of usage. Avoid contact with eyes. If risk of eye contact exists, use safety glasses with side shields (EN 166).

b) Skin protection:

No special requirements are needed under normal conditions of usage. When manipulating with heated/hot material use heat isolating gloves made of para-aramid/carbon with thermal isolation up to 270°C and forearm protection. Example of recommended gloves: KCL, Karbo TECT with leather forearm cuffs, with thermal isolation up to 350°C.

# NOTICE: The selection of a specific glove for a particular application and duration of use in a workplace should also take into account all relevant workplace factors such as, but not limited to: Other chemicals which may be handled, physical requirements (cut/puncture protection, dexterity, thermal protection), potential body reactions to glove materials, as well as the instructions/specifications provided by the glove supplier. Immediately change damaged gloves

c) Respiratory protection:

No special requirements are needed under normal use conditions. Ensure appropriate ventilation or exhaustion at the workplace. Do not inhale decomposition products from overheated product or dust produced by mechanical operations. If engineering controls do not maintain airborne contaminant concentrations at a level which is adequate to protect worker health, an approved respirator may be appropriate. Respirator selection, use, and maintenance must be in accordance with regulatory requirements, if applicable. Types of respirators to be considered for this material include: half-face particle filter respirator, type P1 or FFP1filter (European Committee for Standardization (CEN) standards EN 136, 140 and 405 provide respirator masks and EN 149 and 143 (EN 14387+A1) provide filter recommendations).

d) Thermal hazards:

No such risk when normally used.

#### Environmental exposure controls:

Comply with applicable environmental regulations limiting discharge to air, water and soil. Protect the environment by applying appropriate control measures to prevent or limit emissions. All storage and manipulation are have to be equipped for the sanation of possible leakage. See information in sections 6 and 12.

#### SECTION 9: PHYSICAL AND CHEMICAL PROPERTIES

#### 9.1 Information on basic physical and chemical properties

| Properties                               | value                                | method / condition |  |
|------------------------------------------|--------------------------------------|--------------------|--|
| Appearance:                              | solid wire                           | 20°C               |  |

#### SECTION 10: STABILITY AND REACTIVITY

#### 10.1 Reactivity

Not reactive under normal conditions of storage and manipulation.

#### **10.2** Chemical stability

Mixture is chemically stable under normal conditions of storage and manipulation. Overheating may cause thermal decomposition.

# 10.3 Possibility of hazardous reactions Not known. 10.4 Conditions to avoid Not known. 10.5 Incompatible materials Not known.

# **10.6 Hazardous decomposition products**

Material does not decompose at ambient temperatures. Incomplete combustion and thermolysis may produce toxic, irritating and flammable decomposition products (such as carbon monoxide, carbon dioxide, sooth, aldehydes and other products of hydrocarbons decomposition).

#### SECTION 11: TOXICOLOGICAL INFORMATION

#### **11.1** Information on toxicological effects

No adverse effects for human health are expected for the mixture under normal conditions of usage, the mixture is biologically inert.

# *a) Acute toxicity*

Based on available data, the classification criteria are not met. Based on composition, the mixture has low acute toxicity and no adverse effects for human health are expected under applicable conditions of exposure.

### *b) Skin corrosion/irritation* Based on available data, the classification criteria are not met. The mixture has no direct corrosive / irritating properties.
